

FACILITY PAY AND THIRD-PARTY PAYOR COVERAGE PROTOCOLS

At the Facility's request and in collaboration with UnitedRx Pharmacy, the following Payer Preference Protocols have been reviewed and adopted for its Facilities. Each interchange protocol sets forth criteria that must be satisfied for a therapeutic interchange to take place. Preference protocols are only available between medications that offer comparable effectiveness, safety, and tolerability. Brand and generic versions of listed medications may be subject to interchange. The determination of which medication will be dispensed will be based on the patient's payer's coverage preference. When the Facility is the Payor, the Facility's current medication preference is listed in bold but is subject to change.

By signing below, I authorize Pharmacy to dispense the appropriate medications following the Payor's preferences. I may override this interchange authorization for a specific patient by indicating "Do Not Interchange" I understand and acknowledge that "Dispense as Written" (DAW) has a different meaning than "Do Not Interchange." "Do Not Interchange" communicates to the Pharmacy that the ordered medication's equivalent generic product may be dispensed. The Pharmacy should not interchange between different drug products, according to the formulary's equivalency tables. Additionally, I may discontinue using one or more Protocols at any time by sending a written request to such effect to the Facility and the Pharmacy. I acknowledge that the automatic interchange to the Payor's preferred drug will only occur at the time of dispensing when a prescribing clinician approves the use of a specific Coverage Protocol for his or her residents in our facilities. When interchanging to the formulary preferred drug, appended dosing tables will determine the appropriate dose to dispense. Execution may be limited based on one or more of the following, including but not limited to: setup capabilities, allergies, prescriber request, pharmacist clinical judgment. I hereby approve of Pharmacy making available the Payor Preference Protocols that I have agreed to above for potential use. I authorize Pharmacy to update any medication order, as needed, to achieve the lowest pill burden for a given patient by optimizing the strength of the medication product to be dispensed without altering the ordered dose or frequency. (Example: 25mg tablets: Take three tablets BID will be subjected to the following order update by Pharmacy: 75mg tablets- Take one tablet BID. The Pharmacy will be responsible for timely communication of any/all order updates to the Facility. I further authorize the Pharmacy to separate combination medication orders into corresponding single-entity medication orders, when preferred by the Payor. Your signature of participation applies to all building locations managed by this account.

I authorize UnitedRx to submit prior authorizations to the patient's insurance plan as an agent of, or on behalf of myself as the practitioner for the patients I service.
